

Saving Edits

Optimizely CMS saves your edits automatically with Autosave Timestamp

When you are editing a page, you can see it being saved through the **Autosave** function with a system-generated timestamp. Click **Undo?** to select the following options:

1. Undo to discard your changes on the page you are editing.
2. Redo if you discarded your changes through Undo and want to take them back. This option is only available if you have clicked Undo first.
3. Revert to Published to take you back the latest published version.
