The Child and Adolescent NeuroDevelopment Initiative is a research program at the University of Massachusetts Medical School that is committed to rapidly advancing the understanding, diagnosis and treatment of individuals with neuro-developmental challenges (autism, early onset bipolar disorder and schizophrenia) and to improving the care of children and families affected by these disorders.

Have you or has someone you know:

- been experiencing unusual thoughts?
- been experiencing unusual perceptual experiences?

CANDI Lab
Child and Adolescent Psychiatry

Website: http://www.umassmed.edu/psychiatry/
A clinical research study at the University of Massachusetts is testing an investigational medication for these problems in adolescents and young adults.

Study Participants Must Be:
- 16-40 years old
- Physically healthy

Study Participants May Receive, at No Cost:
- Comprehensive study-related psychiatric evaluation
- Investigational study medication
- Compensation for time and travel

At all times you or your child’s information will remain confidential.
