This Viewpoint discusses 3 types of systemic health inequity experienced by individuals with intellectual and developmental disabilities—stigma, exclusion, and devaluation of worth; underrepresentation in population epidemiology and research; and inadequate access to care and social services—and suggests potential approaches to ameliorating inequities in each of these areas.

# Readmission Reduction as a Hospital Quality Measure: Time to Move on to More Pressing Concerns?

**Abstract** | Full Text

JAMA. 2022;328(16):1589-1590. doi:10.1001/jama.2022.18305

The authors of this Viewpoint argue that the focus on hospital readmission rates as a measure of quality during the past decade, although undoubtedly leading to some improvements in care, has had minimal demonstrable benefit and has even distracted clinicians and health system leaders from other crucial quality concerns.
