Course Learning Objectives
By the end of the session, the student will...
• understand basic physiology of the male and female urogenital system
• connect the physical exam to common urologic diagnoses
• explain the dynamics behind the most common urologic procedures
  learn how a patient is prepared pre-op and the rehabilitation often involved post-op

Course Description
The aim of this elective is to expose the student to the training and skill set of an urologist. The student will participate in interviewing and examining patients in both the inpatient and outpatient setting. They should come away with an understanding of basic procedures, in addition to learning about advances in the field. Urological procedures often result in drastic changes in the patient’s quality of life – the student should understand the patient’s perspective in this aspect.
