Care of Patient who has Experienced Sexual Assault – OE 959

Brief description (200 words or less of course details):

Currently there is little incorporation of managing concerns of sexual assault in the curriculum, yet the topic is relevant to many medical fields/providers. This OEE will introduce students to caring for patients (adult and pediatric) who have experienced acute and/or chronic sexual assault. This OEE will supplement the core curriculum and enable participants to develop competence responding to concerns of sexual assault, learn appropriate medical treatment of patients who have experienced assault, and become familiar with available resources. Hearing first hand experiences of patients and caregivers will enhance student’s communication skills.

Semester offered: Fall

Registration information: Contact student leaders below

Requirements for credit:

Students must attend 6/8-9 of the class sessions and complete a 1-2 page reflection at the end of the course. Students who are unable to attend all of the required sessions will write a reflection after independent research into the session’s topic.
