Does your child or adolescent have mood swings?

Is your child taking medication for bipolar I disorder, but still suffering from symptoms?

The Worcester Public Schools is not responsible for, or connected with, any aspect of this program and participation in this program is the sole decision and responsibility of the parent guardian.

CANDI Lab

The Child and Adolescent NeuroDevelopment Initiative is a research program at the University of Massachusetts Medical School that is committed to rapidly advancing the understanding, diagnosis and treatment of individuals with neurodevelopmental challenges such as autism, early onset bipolar disorder and schizophrenia, and to improving the care of children and families affected by these disorders.
A clinical research study at the University of Massachusetts Medical School is testing an investigational medication for bipolar I disorder in children and teens.

Study Participants Must Be:

- 10-17 years old.
- Diagnosed with bipolar I disorder.
- Currently on a stable dose of a bipolar medication but still experiencing symptoms.

Study Participants May Receive, at No Cost:

- Comprehensive study-related psychiatric evaluation.
- Investigational study medication.
- Compensation for time and travel.

At all times you or your child’s information will remain confidential.

Children and teens enrolled in this clinical trial may continue on their current prescribed medications in addition to receiving the investigational study medication.

Who We Are:

Jean A. Frazier, MD is Vice Chair and Director for the Division of Child and Adolescent Psychiatry at the University of Massachusetts Medical School.
